

Summary

- 5+ years of experience in design, development, and deployment of full-stack microservices using cloud technologies.
- Proficient in Java, Go, Python, Kubernetes, and AWS/GCP, with a strong focus on building scalable and reliable systems.
- Adept at optimizing services, integrating secure architectures, and delivering impactful solutions.
- **Certifications:** Associate Cloud Engineer (**Google**), PCAP certification (**Python Institute**), Microsoft Technology Associate.
- **Honor:** Selected among the **top 1%** of employees at HSBC for an exclusive **UK** training program.
- **Awards:** Received "**Employee of the Year**" award at HSBC in 2021. Awarded **A+** grade in C language in C-DAC, GIST.
- **Leadership:** Organized **HSBC Hackathon** with 200+ participants & directed "Lakshya 2019" event with **100+** participants.

PROFESSIONAL EXPERIENCE

Apple

- Software Engineer II (Cupertino, CA) **Tech:** - Python, React, AWS, CI/CD, bash/Shell **Dec 2025 – Present**
- Engineered release tools automating build pipelines & quality validation across Apple OS, reducing cycle time by 20–40%
 - Modernized release dashboard with real-time metrics & build status across Apple OS, improving cross-team decision-making.
- Software Engineer (Sunnyvale, CA) **Tech:** - Go, Python, MongoDB, Kafka, RabbitMQ, AWS, K8s **Feb.2024 – Sept 2025**
- Implemented real-time **data sync** (FM→Studio) using **push notifications** for imports and improved data freshness.
 - Expanded Studio's **data ingestion capabilities** by integrating FileMaker Cloud as a data source for 100+ customers.
 - Simplified & deployed permission management between 2 collections (File, Entity) by migrating metadata with **0-downtime**.
 - Developed & released frequently asked user features (Batch Imports metadata & Rich user information) of Claris Studio.
 - Integrated **OIDC** & **SAML** across platforms (Google, Azure, Okta), authored design docs & test plans, resolved critical bugs.
 - Developed a **robust notification system**, enabling **real-time alerts** via email with high performance, scalability & security.
- Software Engineer Intern (Sunnyvale, CA) **May 2023 – Aug. 2023**
- **Migrated** 10+ services of Claris Studio to replace Docker Desktop with Colima and **saved \$90K/year** for org.
 - Designed & developed **real-time change notification** for Claris Studio WebApp using web hook and notification service.
 - Enhanced developer experience by shortening Kubernetes configuration from full name to version number.
- Software Engineer Intern (Seattle, WA) **May 2022 – Aug. 2022**
- Developed frontend & backend WebApp features (infinite scrolling, download, preview, sharing) for Apple S3 object storage.
 - Configured end-end **CI/CD** pipeline with automated **AWS** deployments and built **dashboard** using AWS CloudWatch.

Microsoft

- Software Engineer II (Redmond, WA) **Tech:** - C++, Python, Azure, Sentinel, OTLP, Kusto, Apache Kafka, Spark **Oct. 2025 – Nov 2025**
- Implemented OTLP-based telemetry pipelines to benchmark Microsoft Sentinel ingestion & query performance.
 - Build scalable data pipelines to land performance telemetry in Azure Data Lake for regression analysis & trend trekking.
 - Tuned ingestion throughput, schema layouts & partitioning strategies to improve latency, cost efficiency & benchmarking.

Tesla

- Software Engineer Intern (Palo Alto, CA) **Tech:** - Go, Angular, Python, MySQL, Jenkins, Jira, Postman **Sept. 2022 – Jan. 2023**
- Developed product inventory **microservices** using **Go, Python** and established data models for Tesla's retail ecosystem.
 - Built **scalable** inventory flow architecture to integrate **MySQL** for persistent storage within Tesla's internal tool infra.
 - Migrated legacy retail sales **UI** to Tesla's proprietary feature library by implementing **Angular** components to maintain parity.
 - Led frontend integration testing post-library migration to ensure pixel-perfect rendering & responsiveness across browsers.

HSBC - Pune, India

- Software Engineer **July 2019 – Aug. 2021**
- Developed **microservices** using **Java** for extracting data from **ORMB**, transforming into invoices and sending to clients.
 - Increased **security** posture of **Cloud** services by resolving vulnerabilities identified via **Netsparker** scan & **Checkmarx**.
 - Implemented **certificate reconciliation** for Digital Ledger System using **Artificial Intelligence** and **Flask** framework.
 - Designed & Implemented **Android** application prototype for online banking operations with **Chatbot** secure access.

TECHNICAL SKILLS

- | | |
|------------------------------|--|
| • Languages: | Java, Python, Golang, C, C++, J2EE (JSP, Servlets, Spring Boot), C#, .NET, Hadoop, HDFS, Scala, DAML |
| • Web Technologies: | React, Angular, Vue, NextJS, HTML5, CSS3, AJAX, TypeScript, RESTful API, GraphQL, Websockets |
| • Cloud & DevOps: | AWS (EC2, S3, Lambda, RDS, DynamoDB, SNS, SQS, CloudWatch), K8s, Docker, Jenkins, GCP, Azure |
| • ML libraries: | TensorFlow, PyTorch, Keras, Scikit-learn, NumPy, Pandas, OpenCV, Hugging Face, spaCy, NLTK |
| • Databases and OS: | MySQL, PostgreSQL, Oracle 10g, MongoDB, Cassandra, Redis, SQL Server, Windows, macOS, Linux |
| • Tools: | STS, Visual Studio, Anaconda, Git, Jenkins, Postman, Splunk, Docker, Android Studio, MuleSoft, Grafana |

EDUCATION

- MS, Computer Science**, University of Texas at Dallas **Aug. 2021 – Dec. 2023**
- BE, Information Technology**, Gujarat Technological University (LDCE) **Aug. 2015 – June. 2019**

ACADEMIC PROJECTS

- Booth Surveillance System** | Java, Spring boot, Hibernate, MySQL, Python, AI, React, JS, AWS **Feb. 2019**
- Implemented REST APIs to monitor and detect fraudulent election voting by identifying unauthorized person using **OpenCV**.
- Color Schema Authentication** | JSP, Java Mail Servlet, JS, CSS, MySQL **Dec. 2017**
- Designed **shuffle function** and security layer with RGBY color codes for login feature with **OTP** for reset.

PUBLICATIONS

- Structure-Preserving Frequency-Aware Generative Network for Robust Image Super-Resolution, **ICCB I IEEE 2026**.
- Performance Analysis of Hybrid Parallel Programming Models for Deep Learning in Heterogeneous HPC Environments, **ICESAIA IEEE 2026**.
- An Explainable Ensemble Learning Framework for Student Performance Prediction Using Big Data Analytics – **CICON IEEE 2026**.
